

Video Recorded Golf Lessons

G.A.S.P Lab Golf Analysis Systems for Professionals

At Dainton Park we offer coaching pupils the most flexible computer instruction software on the market.

The overall experience could not be better; the equipment adds an extra dimension to golf instruction because the information relayed to the pupil is backed up by sound, visual evidence.

Europe's leading golf buying groups have carried out extensive research into the golf teaching market and have voted the software "The world's leading sports analysis system," equally helpful to beginners and experienced golfers alike.

GASP systems are being used throughout the world; John Jacobs, one of the world's leading golf coaches, the Europro golf teaching centre, the Marriot hotel chain and the national P.G.A headquarters at the Belfry have all chosen the GASP software for coaching. Sky Sports and Setanta Sports also use the software to analyse the game for viewers benefit.

At Dainton Park we are fully equipped to get the most out of this fantastic teaching aid:

Video recorded lessons take place inside the flood lit golf studio, from where pupils are able to hit golf balls onto the range towards real targets, promoting parity with the golf course.

The GASP system allows each golf shot to be recorded and then broken down into stages, replayed in slow motion from different angles around the studio
